

Installation Instructions

Ice Diverter Kit Part

620059705 (LH) and 620059706 (RH)

1. Clean the ice chute area using alcohol.

2. Silicone is added to the ice diverter sides and bottom that come in contact with the ice bin, creating a seal around three sides of the ice diverter.

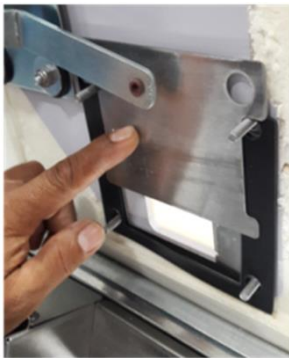

3. Ice diverter is installed onto the opening, over the ice chute studs.

4. The black gasket is installed over the ice diverter.

5. The ice restrictor is installed.

6. The red gasket is installed.

7. The ice chute is installed and torqued to 4-6 inch pounds. Install upper chute. Warning: overtightening will push the red gaskets below the bottom of the ice chute, causing a leak.
